- Rotary-style volume control
- Fits standard wall opening

AT-101

The AT-101 is a rotary-type button volume control housed in a decorator plate. It has 12 positions with the lowest position as "off". The AT-101 is a popular choice wherever users would prefer to have the volume control in one area, with the source in a different place.

The AT-101 has a number of jumper settings for different impedance and for the number of connected speakers. It can handle up to 64 pairs of speakers when impedance matching instructions are followed.
