EASY, TOOL-FREE INSTALLATION

The JGS-10 ground stake is design specifically for tool-free installation of the Jamo JL-4 landscape satellite. With a built-in directivity aid arrow, and a simple 45°-turn satellite installation and locking method, the JGS-10 allows for one of the easiest installation experiences in the landscape speaker market today.

ADDED SECURITY

The included galvanized steel 7" security plate gives integrators or users the option of added security and stability when installing the JGS-10 ground stake, keeping the JL-4 satellite secure, stable, and level throughout the seasons. An included set screw enables locking of the satellite to the stake, for even further security in commercial or high traffic residential environments.

RUGGED, ALL-WEATHER DURABILITY

Construction from rustproof, high impact, glass-filled ABS, the JGS-10 10" ground stake provides exceptional durability and weather resistance in even the most severe conditions.
